

# Easily 0.620.0

2025-02-03 18:27:16

## General

- Minor versions included: 0.610.3 and 0.615.1
- Changes:
  - [#17329](#) :  Added a custom ideas filter for multi-language fields.
- Bug fixes:
  - [#17097](#) : Fixed data loading in e-select-multiple (e.g. selecting product families in smart-peculiarities rules).

## Equipment

### Equipment

- Changes:
  - [#15846](#) :  It is now possible to freely define the maximum percentage of the repair intervention alert threshold for each piece of equipment.

## Products

### Price lists

- Changes:
  - [#17266](#) :  Added new types of mercurials

## Recipes

### Recipe management

- Changes:
  - [#16928](#) :  Added allergens and nutritional values in the API of the "Recipe Valuation" report.

## Menus

### Menu pre-design

- Changes:
  - [#17186](#) : Filled menu plan data and selected menu frames already chosen when opening the duplicate page.
  - [#17185](#) :  In the Menu Predesign screen, until now to display the card of a menu plan you had to click on the ... At the end of the line and then on "View", it is now also possible to display it by clicking directly on the line of this plan.
- Bug fixes:
  - [#17270](#) : When selecting frames, nodes are now sorted alphabetically

### Menus Headcount

- Bug fixes:
  - [#17367](#) : (0.615.1) Entering headcount is again possible on public holidays, and prohibited at the meal level if there is no recipe.

## Sales

### POS datas

- Changes:
  - [#17257](#) : (0.610.3)  The determination of the industrial product to be destocked for each element of the constitution of each recipe now comes from stocks and not from price lists.
  - [#17019](#) :  Sales data consolidation is now done by sales method and recipe.
  - [#17313](#) :  The "grossUnitPrice" field has been renamed to "catalogUnitPrice" and the "netUnitPrice" field has been removed from sales lines.

## Supplier orders

### Receptions

- Changes:
  - [#16737](#) :  A warning is displayed if the user enters a Delivery Note number already registered for a previous delivery for the same supplier over the past rolling year.

## Stock

### Known Losses and markdowns

- Changes:
  - [#17257](#) : (0.610.3) ✓ The determination of the industrial product to be destocked for each element of the constitution of each recipe now comes from stocks and not from price lists.

## Management

### Dashboards

- Bug fixes:
  - [#17351](#) : (0.610.3) Fixed the Sales Cube - Calculate the unit price based on the total amount and quantity of a sales line.
  - [#17351](#) : (0.610.3) Fixed Sales Cube - Totals previously representing totals per sales line are replaced with ticket totals.
  - [#17351](#) : (0.610.3) Fixed Sales Cube - Added new dimensions for totals per sales line: Gross/net amount of sales line.
  - [#17351](#) : (0.610.3) Sales cube correction - Fixed the gross margin per sales line: used the line amount instead of the erroneous unit price calculation.
  - [#17351](#) : (0.610.3) Fixed Sales Cube - Added Supplement Lines and Tickets without Sales Line.
  - [#17351](#) : (0.610.3) Fixed Sales Cube - Fixed Dimension Level: Is Sales Line Level? (SalesReceipt\_level).
  - [#17351](#) : (0.610.3) Fixed sales cube - Nullified unused context data: performance gain.

## Tools

### Imports/Exports

- Changes:
  - [#17220](#) : ✓ In the import of price lists, the maximum length of the extId field has been increased to 50 characters.
  - [#16980](#) : ✓ Added generic\_labelPublic field in import and export of ingredients
- Bug fixes:
  - [#17378](#) : Fixed technical errors in the import of supplier products v2

### Mapal OS

- Changes:
  - [#17343](#) : ✓ When creating or updating a user, if the user has the Mapal-OS "Site"->allow access to all business units" option then it is placed on the root site.
