

Easily 0.630.0

2025-03-04 09:38:31

General

- Changes:
 - [#17418](#) : ✓ Dashboards: Display of the date of last synchronization.
 - [#16462](#) : ✎ Increased the size limit of the body of a query.
- Bug fixes:
 - [#17483](#) : ✎ Rename variables to ensure consistency between multiple command and multiple commands.

Site parameters

Informations

- Changes:
 - [#17462](#) : ✓ Addition of the 'Automatic creation and update of finished product price lists' option on the site form.

Products

Price lists

- Changes:
 - [#17466](#) : ✓ Limitation of /price-list APIs: automatically generated price lists cannot be deleted or duplicated. Generated price lists cannot be updated, except those containing finished products: their start/end dates and activation status can be changed.
 - [#17466](#) : ✓ /price-list-supplier-product API limitations: products cannot be added or removed to generated price lists. The orderable status and validity dates of a product in a generated price list containing finished products can be changed.
 - [#17465](#) : ✓ Limitation of price lists screen actions to reflect API limitations.
- Bug fixes:
 - [#17541](#) : Product list is displayed correctly for auto-generated price lists containing finished products.

Suppliers

- Changes:
 - [#17205](#) : ✓ Creation of the "JOB_DERIVE_RECIPES_FINISHED_PRODUCTS" job to automatically decline recipes for finished products.

Recipes

Recipe management

- Changes:
 - [#17444](#) : ✓ Improved visibility of price per portion.
 - [#17317](#) : ✓ Added "Status" filter to the recipe list to be able to see disabled recipes.

Sales

POS datas

- Changes:
 - [#17474](#) : ✓ Added a JOB_COMPUTE_POS_DATA job that launches the different POS datas jobs.

Sales forecast

- Bug fixes:
 - [#17525](#) : Data is displayed correctly after applying forecasts.
 - [#17457](#) : The forecast now correctly inserts a quantity = 0 for past days for recipes inserted into an existing meal in the current week.

Menus

Menus

- Bug fixes:
 - [#17152](#) : Disabled menu frames are no longer displayed in the sales journal

Enter the count

- Bug fixes:
 - [#17423](#) : The button for cancelling an entry is now functional again.

Smart particularity

- Bug fixes:
 - [#17449](#): The information of the criterion type "menu item" is now visible in the timeline column

Menu pre-design

- Changes:
 - [#17448](#): ✓ Impact of the "Meal type" criterion in smart particularity rules when simulating a map menu. Added the " Meal type " criterion in the reports "Analysis of smart peculiarities rules affecting this menu plan" and "Analysis of revenue assigned by frames".
 - [#17271](#): ✓ Added a filter on recipe tags at the level of adding recipes in a menu plan
- Bug fixes:
 - [#17461](#): Fix: Searching for menu frame labels when creating/duplicating a menu plan was only partial
 - [#17467](#): Fixed the impact of menus on Sundays.

Supplier orders

Supplier orders

- Bug fixes:
 - [#17540](#): Fixed an error about the order multiple blocking the addition of a product when the grouping mode is by ingredients or by purchase generics.

Stock

Inventories

- Bug fixes:
 - [#16395](#): ✓ Fixed scroll positioning issue when tabbing

Tools

Imports/Exports

- Bug fixes:
 - [#17435](#): Added missing filters in the export of price lists.

Interfaces

- Changes:
 - [#17443](#): ✓ Created the new Orion interface function for external validation of supplier invoices. This function is currently an empty shell that controls the interface configuration.
 - [#17443](#): ✎ Created an interface type for each interface process called from Easily APIs. This makes it possible to know which configured interface(s) to call for a given type of process.
- Bug fixes:
 - [#17443](#): It is now possible to configure on an Easily environment multiple interfaces that have identical process names.

Mapal OS

- Bug fixes:
 - [#17493](#): Profile duplication in Mapal-OS no longer modifies the original profile. A new profile is created as expected.
