

# Easily 0.635.0

2025-03-25 11:10:21

*The changes and fixes made in versions 0.620.2, 0.630.1 and 0.630.2 are included in this version*

## General

- Changes:
  - #17524: ✓ The Label text field of a guest is now a multi-language text field (data translatable by the user in the language defined on his profile).
  - #17520: ✓ The Label text field of a segment is now a multi-language text field (data translatable by the user in the language defined on his profile).
  - #16701: ✓ Implemented the standard JWT token version easily.
  - #17610: ✎ Added changelogs in the Easily binary.
  - #17498: ✎ Added configuration keys 'MAPAL\_OS\_AUTH\_IS\_ACTIVE' and 'MAPAL\_OS\_TOKEN\_GENERATION\_IS\_ACTIVE' to enable or disable Mapal OS authentication and token generation.
  - #17499: ✎ Mapal OS token is used for authentication if configuration key 'MAPAL\_OS\_AUTH\_IS\_ACTIVE' is set to 'true'
  - #17519: ✓ The 'Label' text field in the category menu is now a multi-language text field (data translatable by the user in the language defined in his profile)...
  - #17596: ✎ A user will not be able to reset their password if Easily is logged in to Mapal OS.
  - #17498: ✎ Added configuration keys 'MAPALOS\_AUTH\_IS\_ACTIVE' and 'MAPALOS\_TOKEN\_GENERATION\_IS\_ACTIVE' to enable or disable authentication and token generation by Mapal OS.
  - #17499: ✎ Mapal OS token is used for authentication if configuration key 'MAPALOS\_AUTH\_IS\_ACTIVE' is set to 'true'
- Bug fixes:
  - #17555 (v0.630.1): Fixed a bug that prevented the site creation form from being opened.
  - #17557: ✎ Fixed last sync date on dashboard

## Home

Home

- Bug fixes:
  - #17559 (v0.630.1): The last sync date of dashboards is no longer displayed on Home page.

## Products

Product Administration V2

- Changes:
  - #17543 (v0.630.1): ✓ The multiple of supplier order units accepts decimal numbers.
  - #17556 (v0.630.1): ✓ Products are created by default as unpackageable.
- Bug fixes:
  - #17629: Fixed a bug that prevented saving product changes

Price lists

- Changes:
  - #17463: ✓ Modified the JOB\_GENERATE\_SUPPLIER\_SITE\_PRICELISTS job to add automatic price list generation containing finished products to a supplier site, based on its site options.
- Bug fixes:
  - #17553 (v0.630.1): Fixed a bug that prevented the "Create a price list" button from working when no price list was selected.

Suppliers

- Changes:
  - #17325: ✓ Added a new setting for the validation of supplier invoices by a third-party application.

## Recipes

Recipes management

- Changes:
  - #17475: ✓ The Recipe Preparation text field is now a multi-language text field (data translatable by the user in the language defined on his profile).

- #17477: ✓ The Label text field of a label transformation type is now a multi-language text field (data translatable by the user in the language defined on their profile).
- Bug fixes
  - #17565 (v0.620.2): Improved performance when using the simulator.

#### Recipes

- Changes:
  - #17475: ✓ The Recipe Preparation text field is now a multi-language text field (data translatable by the user in the language defined on his profile).

#### Print labels

- Bug fixes:
  - #17437: Creating INCO labels without a printer configured is now possible.

### Sales

#### POS datas

- Changes:
  - #17302: ✓ The material cost of revenue sold is now calculated using the valuation of stock movements.
- Bug fixes:
  - #17562 (v0.630.1): Fixed application crash when running sales import jobs and global cash register data processing job.
  - #17302: Fixed the total material cost per recipe calculated by the cash register data consolidation job.

#### Dashboards

- Changes:
  - #17482: ✓ Added the "Sales - Global View" dashboard.
  - #17482: ✓ Removed the "Sales" source in favor of the new "Consolidated Sales" cube.

### Menus

#### Menu templates

- Bug fixes:
  - #17412: When duplicating, sites are now sorted alphabetically.

#### Smart Particularity

- Changes:
  - #15143: ✓ Implementation of the impact of period types in smart particularity rules.
  - #17454: ✓ Migrated old filters to '+' mode and fixed several filter errors.

#### Menu pre-design

- Bug fixes:
  - #17600: Fixed bug that showed the delete all button for rules when in reading mode.
  - #17175: Correction of a dysfunction when a smart particularity rule concerns several criteria, e.g. recipe category AND product.

### Supplier orders

#### Order preparation

- Bug fixes:
  - #17263: Order preparation made from site orders are now added together normally if a product ordered is identical on several orders for the same day.

#### Supplier orders

- Bug fixes:
  - #17543 (v0.630.1): Decimal on multiples of supplier order units now work correctly.

#### Track orders

- Bug fixes:
  - #16271: Product prices are now preserved in case of a bulk change in order status.

#### Receptions

- Bug fixes:
  - #16927: Fixed inventory movements in case of batch with quantity at 0

#### Claims

- Bug fixes:
  - #17469: Fixed incorrect date on the claim report

## Supplier invoices

- Changes:
  - #17325: ✓ Added a step for validating invoices by a third-party tool based on the supplier's configuration.

## Production

### Production Plan v2

- Changes:
  - #17404: ✓ Added production quantities and corresponding production batches if configured.
  - #17534: ✓ Recipe image has been added to the V2 production screen

## Shipment

### Packaging and Logistics

- Changes:
  - #17587: ✓ Allotment report: addition of sanitary stamps for production and delivery sites.

## Stock

### Stock v2

- Changes:
  - #17335: ✓ It is now possible to display for the "cash out" movements of a product, the list of sold and sub-produced receipts that have used this product.
- Bug fixes:
  - #17506: Addition of an icon and display of the designation in italics to visually identify supplier products that are no longer active (old version).

### Inventories v2

- Bug fixes:
  - #17316: Fixed the "GAP BETWEEN THEORETICAL AND FINAL INVENTORY" value in the "Inventory Gap" report.
  - #17549: Fixed offline mode for PKG (OVH) environments.
  - #17506: Addition of an icon and display of the designation in italics to visually identify supplier products that are no longer active (old version).

## Management

### Revenue Management

- Changes:
  - #17302: ✓ The "Revenue Management" screen and the revenue APIs have been removed, in favor of the data available in the POS data screen.

## Tools

### Imports/Exports

- Changes:
  - #17475: Updated the instruction field of the import/export matrix of Recipes to support multi-language (data translatable by the user in the language defined on his profile).
  - #17325 : Add supplier\_hasExternalInvoiceValidationProcess field to supplier import/export matrix.
  - #16991: Country is no longer mandatory in importing addresses for sites
- Bug fixes:
  - #17548 (v0.630.1): Fixed update to the nbProductionPerOrders field in the import of supplier products v2. Fixed the integration of the new article\_nbOrderMultiple and article\_isUnpackable fields in the import of supplier products v1.
  - #17473: When importing a site provider link, with the fullimport option, providers attached to child sites were not properly disabled even if the link was not present in the matrix

### Interfaces

- Bug fixes:
  - #17598 (0; 630.2): In the interface with Ma Cantine, the calculation rules for the valueSustainableHt, valueExternalityPerformanceHt and valueEgalimOthersHt fields have been corrected.
  - #17074: When recovering from functional errors from Orion, a cleanup is done to remove any html tags.
