

Easily 0.645.0

2025-04-28 17:13:45

The changes and bugs corrected in version 0.640.1 are included in this version.

General

- Include the v0.640.1.
- Features:
 - #17729 :  Add extData field to tax api, so that taxes can be updated via the API.
 - #17301 :  The message 'No network connection' is now displayed on all screens when the connection is lost. This prevents users from making entries that cannot be saved.
 - #17612 : (Easily Analytics) Added predefined date filters (Today, Yesterday, Before Yesterday) to date picker component.
 - #17488:  (Easily Analytics) Added pricelists cube.
- Bug fixes:
 - #17713 : (Easily Analytics) A graph widget could not be displayed on opening without refreshing the dashboard page.

Call for tenders

Call for tenders

- Bug fixes:
 - #17292 : Fix the retrieval of an incorrect ratioCookedOverRaw during answer generation in a tender process

Products

Price lists

- Features:
 - (v 0.640.1) #17745:  Add logs and traces on imports process.
- Bug fixes:
 - (v 0.640.1) #17637: Only xlsx, ods and csv files are now allowed to be imported and exported. A specific error message will be displayed if a file in another format is imported or exported.

Smart Catalogue®

- Bug fixes:
 - (v 0.640.1) #17734: Performance improvements on product_flat. This improves execution time.

Recipes

Recipes management

- Features:
 - #17585 :  Add the ability to enter decimal values to Production batch.
- Bug fixes:
 - #17594: Fixed a bug where components quantities were not displayed on recipe report.

Menus

Smart Specifications

- Features:
 - #17453:  Rebrand "Smart Peculiarity" to "Smart Specifications". Renamed the "publish" functionality and related "impact" components, to better reflect the feature's purpose. Updated variables, methods, components names, and associated translations, for consistency. Minor text correction also included in the French localization file.

Menu pre-design

- Features:
 - #17515:  Improved search for menu frames to be added to a menu plan so that it is possible to search not only by frame name but also by the name of the sites concerned.
 - #17738:  Added recipes after a simulation are now more distinct. This distinction is only there until a new simulation or leaving the page.
- Bug fixes:
 - (v 0.640.1) #17681 : Fixed the added recipe to a menu-plan failing.

Guest orders

Guest orders summary

- Bug fixes:
 - (V 0.640.1) #15826: Fixed Consolidated Orders report (spreadsheet) no longer working.

Supplier orders

Supplier orders

- Features:
 - #17427 :  Supplier orders can now have their comment and last sent preorder date updated through the update API for EDI.

Receptions

- Features:
 - #17727 :  Add these fields to the status tracking report: Supplier Code, Order Number, Planned Delivery Date, Source(manual, model, etc...) and Delivery Note Confirmation Record Date.

Stock

Stock v2

- Features:
 - #17300:  Added detailed view of known losses & markdowns movements.

Stock transfer

- Bug fixes:
 - #15869 : Transfers to sites with stock transfer disabled are no longer permitted.

Known losses and markdowns

- Features:
 - #17300:  Added material cost of losses.

Management

Management

- Bug fixes:
 - #14499: Fixed a bug preventing the use of POS sales data when using the JOB_COMPUTE_POS_DATA job instead of the JOB_SALES_RECEIPT_CONSOLIDATION job.
 - #14499: Fixed a bug where the final inventory total on one period is different from the initial inventory total on the following period when a product has its stock going to 0 on the second period.
