

Easily 0.650.0

2025-05-13 16:16:20

General

- Features:
 - #17758: ✓ In Easily Analytics, certain dimensions of the Price Lists cube have been renamed to make them more intelligible.
- Bug fixes:
 - #17672: Correction of a bug which meant that some sites might not appear in the list allowing you to change site.
 - #17760: In Easily Analytics, the visibility / confidentiality of the dashboards now applies to the desired profile(s) correctly, whatever the site level.
 - #14356: Easily Analytics: the pivot table did not display cell values if the column value contained dots.

Site parameters

Information

- Features:
 - #17608 : ✓ Addition of the 'Automatic control of D-x days turnover integration' option on the site parameters page. By ticking this option and entering the desired number of days, mapal teams will (in a future version) be alerted if no sales is integrated for this site X days after the sale date.

Sites

Easily Analytics

- Features:
 - #17760: ✓ Improved UI/UX.

Equipment items

Interventions

- Features:
 - #17757 : ✓ Added calculation of the number of days the equipment was affected by the intervention, i.e. the time between the intervention request and the declaration of completion.
 - For completed interventions, the date and time at which the intervention was declared 'Completed' is now displayed.
 - Two columns have been added to the 'List of jobs' report: 'Declared completed', indicating the completion date, and 'Days impacted', indicating the duration of the downtime.

Products

Price lists

- Features:
 - #17748: ✓ In the price lists creation and update screen, it is now possible to indicate whether or not to update automatically every night:
 - finished product prices
 - the characteristics of finished products. These options are only available for sites that manage finished products.
 - /!\ In this version, the options can be configured, but they will only take effect in the next version.
- #17599: ✓ In the case of auto-generated price lists, Job `JOB_PRICELISTS_UPDATE_FINISHED_PRODUCTS_FROM_COST_PRICE` now impacts nutritional values, allergens and certifications in the valuation of finished product recipes. This data is now taken into account in the corresponding finished product..

Sales

POS data

- Bug fixes:
 - #17250 : Mapping control corrected to send an email notification only if a POS product is not mapped to an Easily recipe or if a POS product is mapped to an Easily recipe without composition.

Menus

Menu templates

- Bug fixes:
 - #15918: When a menu frame is duplicated from the Menu Template screen, the number of affected frames indicated in the message is now correct.

Smart Specifications

- Features:
 - #17707: ✓ Add an 'Add All' button. This button adds all visible items to the list, so it can be used in conjunction with the search functionality.

Menu pre-design

- Features:
 - #17622 : ✓ Improve UI by reducing the height of recipe cards tiles.

Supplier orders

Track orders

- Features:
 - #17754: ✓ The panel displaying the list of orders has been made larger, and a tooltip has been added to the supplier label to display the full name when it is very long.

Stock

Stock v2

- Bug fixes:
 - #17756: Fixed a bug in the detailed view of a POS sale or known markdown /loss movement, showing null PO for the produced quantity of a sub recipe that is not a direct component of the sold recipe.
 - #17756: Fixed a bug in the detailed view of a POS sale or known markdown /loss movement, showing a negative produced quantity when the site option "Manage the quantities in the recipes" is set to "Net".
 - #17756: Fixed a bug in the detailed view of a POS sale or known markdown /loss movement, showing an empty table.
