

# Easily 0.655.0

2025-05-26 18:57:26

*The changes and bugs corrected in version 0.640.2 and 0.650.1 are included in this version.*

## General

- Features:
  - #17381:  Removed /sale-types and /offer-types APIs. As a result, in the settings for the pages open to profiles, the 'POS record - Offer types' and 'POS record - Sales type' sections, which concerned actions linked to obsolete pages, are no longer visible. This avoids misunderstandings during configuration.
- Bug fixes:
  - #17816 : The selection of a period in the calendar was limited to 30 days. The limit has been removed.

## Sites Parameters

### Informations

- Features:
  - #17801:  Added a site option (disabled by default) to allow or prevent inventory creation if receipts are still in progress on the desired date (or earlier), to prevent stock discrepancies related to receipts validated after the fact. This option "Prevent inventory creation if receptions are in "In Progress" status on the inventory date or an earlier date" is on the site form.

## Sites

### Site settings

- Bug fixes:
  - #17802: Hide auto check of sales integration section reserved to the Mapal team. As a result, only the Mapal team will see the 'Automatic check of sales integration' option on the site form.

## Equipement items

### Suppliers

- Bug fixes:
  - #17668: Correction of supplier search: When associating a supplier, it was necessary to type almost the entire name for it to appear, especially when the result list was long. No "load more" option was offered, which significantly limited the search. This issue has been fixed: results are now better filtered from the first characters typed, and the user can access the full list.

## Products

### Products administration - V2

- Bug fixes:
  - #16465: Fixed the ability to delete the image of a certification.

### Price lists

- Features:
  - #17768:  (v0.640.2) Add more logs and traces on imports process. And for the SQL part, logs will be in clear text on the server side and will remain masked to the user for security reasons.
  - #17797:  The `isPriceAutoUpdateEnabled` and `isCharacteristicsAutoUpdateEnabled` options, which allow you to specify whether or not to automatically update the prices of finished products and/or the characteristics of finished products every night, are now taken into account.

## Recipes

### Recipes management

- Bug fixes:
  - #17689: Fix duplicate rows in the 'valuation of recipes' report due to control dishes.

### Recipes

- Bug fixes:

- #16576 : Non-food ingredients are no longer taken into account in the calculation of nutritional values, regardless of the value of the "Include non-food ingredients" simulation parameter.

## Sales

### POS data

- Features:
  - #17802:  A sales revenues integration check is added after the consolidation process. Based on related site settings and environment config, an email is sent to the mapal support team listing the sites that failed the check.

## Menus

### Menu templates

- Features:
  - #17711:  Removal of the duplication constraint for menu frames when a parent menu frame is linked. It is now possible to duplicate a menu frame on frames that already have a parent frame.

### Smart Specifications

- Bug fixes:
  - #17751: Minor visual changes in the Smart Specifications management rule panel.

### Menu pre-design

- Features:
  - #17781:  When publishing menu plans, pinned recipes (when available) are used to complete missing recipes instead of placeholder recipes.
- Bug fixes:
  - #17752: Fix some UI/UX bugs:
    - Made grey buttons fully rounded (circular).
    - Added label to the "+" button.
    - Removed extra border from the table.
    - Aligned the search bar with the rest of the content.
  - 17806: Fix filtering with incompatible recipes by dish.

## Supplier orders

### Receptions

- Features:
  - #17203 :  Add the supplier type field in the matrix of the api which get the receptions list for a site from a date range.

### Supplier Invoices

- Bug fixes:
  - #17709 : Fixed bug that prevented invoices from being updated from "validated" to "sold out" status.

## Production

### Production plan v2 /!\ BETA screen not yet available

- Features:
  - #17774 :  Added drag and drop support for batches and the ability to partially move a production. When dragging a production batch over a production day it will open a modal with all the necessary options. It is not saved by the server for now

## Stock

### Stock v2

- Features:
  - #17837:  Updated some UI labels to make it easier to understand when displaying the detail panel for a POS or known shrinkage and loss movement.
  - 17818 :  Listen to losses event in Easily.

### Inventories v2

- Features:

- #17801: ✓ When an inventory is created, information is now displayed if goods receipts are in progress on the chosen inventory date or on an earlier date when the inventory was created. Depending on the site settings for the 'Prevent inventory creation if receptions are in "In Progress" status on the inventory date or an earlier date' option, it may or may not be possible to create an inventory in this situation.

## Tools

### Imports / Exports

- Bug fixes:
  - #17755: (v0.650.1) Fix import supplier product v2 and price list when there are multiple suppliers, pricelists and supplier products with same external id.
  - #17684: 🛠️ (v0.650.1) Make sure supplier cannot be deactivated on the site that created them via the "supplier site" link import
