

# Easily 0.660.2

2025-06-13 10:29:26

*The changes and bugs corrected in versions 0.655.1, 0.660.0, 0.660.1 and 0.660.2 are included in this version.*

## General

- Features:
  - #17841 : (0.660.0)  Update migration script for datasets to support new architecture of multilingual fields.
  - #17841 : (0.660.0)  The Range table has now a multi-language text field : label18n.
  - #17855 : (0.660.0)  The CategoryMenu table has now a multi-language text field : label18n.
- Bug fixes:
  - #17909: (0.660.1)  Fixed multilingual migrations of fields Range.label and CategoryMenu.label that could fail if any row had label = "".
  - #17909: (0.660.1)  The function getLangFromData() will now return the first non-empty match.

## Products

### Price lists

- Bug fixes:
  - #17599: (0.660.2) JOB\_PRICELISTS\_UPDATE\_FINISHED\_PRODUCTS\_FROM\_COST\_PRICE: fixed recipe cost price calculation to be per portion instead of per recipe.

## Menus

### Menu pre-design

- Bug fixes:
  - #17836: (0.655.1) Improved recipe list display performance when adding a recipe to a menu plan.
  - #17820 : (0.660.0) Improved user experience when launching the simulation and the impact of the menus:
    - During the simulation, the days are now processed one after the other and the progress of processing is highlighted by the appearance of success or alert pictograms on the days as they progress.
    - When menus are impacted, the progress of the number of menu frames impacted is now indicated.
    - If the user leaves the screen during the impact, this does not interrupt it.
    - When an impact is in progress, another can be programmed: this will remain on standby and will start automatically once the previous one has finished.

## Stock

### Known losses and markdowns

- Bug fixes:
  - #17824: (0.655.1) NC was displayed instead of €0 for the calculation of known losses and shrinkage in the case of a zero material cost. This has been corrected.
  - #17824: (0.655.1) From now on, the fact that part of the recipe components cannot be de-stocked no longer prevents the de-stocking job from working on the rest of the products.

## Sales

### POS data

- Features:
  - #17400: (0.660.0)  Addition of Mapal Smart Analysis, enabling screen data to be analysed by AI.
- Bug fixes:
  - #17883: (0.660.0) (Internal) Fixed a bug preventing the auto check of revenue integration to report missing revenues on Sundays.

## Supplier orders

### Supplier orders

- Bug fixes:
  - #17708: (0.660.0) Fixed the bug where the quantity was not incremented when adding a product with a reservation delay (preOrderDelay). The quantity is now correctly incremented instead of being overwritten.

### Receptions

- Bug fixes:

- #3188: (0.660.0) Fix the inability to modify or delete batches after that a reception has been reopened

## Production

Production plan v2 /!\ BETA screen not yet available

- Features:
  - #17769 : (0.660.0) ✓ Drag and drop actions are now saved in db

## Stock

Known losses and markdowns

- Features:
  - #17840: (0.660.0) ✓ Addition of Mapal Smart Analysis, enabling screen data to be analysed by AI.

## Tools

Imports / Exports

- Features:
  - #17673: (0.660.0) ✓ Added sales forecast import (import only)
- Bug fixes:
  - #17630: (0.660.0) 🔧 Eliminate restriction when importing recipes with existing element\_public\_label but new extld
