

Easily 0.670

2025-07-21 16:34:55

The changes and bugs corrected in versions 0.665.1, 0.665.2, 0.665.3 et 0.666.0 are included in this version.

General

- Features:
 - #17941: ✓ The label18n text field of Texture is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #17944: ✎ The Guest table has now a multi-language text field: label18n.
 - #17942: ✓ The label18n text field of Segment is now a multi-language text field.
 - #17895: ✓ Updated default product weight per litre from 0 to 1000 (water density). Added a constraint (800-1500 range) to ensure accurate nutritional calculations. Existing products outside this range are automatically updated to 1000.
- Bug fixes:
 - #17945 (V.0.665.1): Fixed a bug preventing v1 pages to load when using some locales with a missing translation.

Equipment items

Suppliers

- Bug fixes:
 - #17929 (V.0.665.3): Fixed a bug which meant that, under certain conditions, changes to a supplier record were not visible. The supplier update now displays the expected data.

Interventions

- Features:
 - #17798: ✓ Add a workflow for approving intervention requests, with two new dedicated statuses ("To be validated", "Refused"), mandatory justification in the event of refusal by the validator, and restricted editing after validation.

Products

Products administration - V2

- Bug fixes:
 - #17730: Changes made to products from the screen "Products administration - V2" screen are now correctly saved.

Price lists

- Bug fixes:
 - #17954 (V.0.666.0): Fixed a bug that caused duplicate products to appear in different automatically generated price lists for finished products.

Menus

Menu quantities v2

- Bug fixes:
 - #17950: Fixed an informational message in the quantity's duplication modal: ordered quantities (not planned) of the reference period are duplicated to the planned quantities of the target period.

Smart Specifications

- Bug fixes:
 - #17980 (V.0.665.3): Correction of the fact that the Smart specification rules were not applied correctly when they concerned receipts that were also sub-receipts of other listed receipts.

Supplier orders

Order preparation

- Bug fixes:
 - #17948 (V.0.665.2): Revert of development #17641 (*Add an option to take into account the order multiple for the supplier's breakable products - STEPT*) in order to correct a regression in the multiple selection of products to be ordered in order preparation.

Receptions

- Features:
 - #17940: ✓ The status of a 'PENDING DELIVERY' reception can now be set to 'IN PROGRESS' when the reception is blocked.

- Rights changes:
 - Right "Move a receipt out of the 'awaiting delivery' status to allow a new sending attempt or manual processing" has been added.

Production

Production plan v2 /!\ BETA screen not yet available

- Features:
 - #17970: ✔ Added ability to cancel a manual time lag.
- Rights changes:
 - Right "Cancel manual production day adjustments for a recipe or for recipe batches" has been added.

Stock

Known losses and markdowns.

- Bug fixes:
 - #17916: Favourite templates were not sorted first.

Tools

Imports / Exports

- Bug fixes:
 - #17874: Pagination was not working properly, resulting in data truncation.
