Site parameters

Profiles

- Features:
  - #18114: ⛔ WIP: add the list of profiles on the side menu of the right management V2.

Products

Suppliers

- Bug fixes:
  - #18120: Fixed a bug preventing suppliers from having a different default payment method on a child site, while having the same list of payment methods (or vice versa).

Menus

Menu templates

- Features:
  - #18026: ✔ Improve Texture-Segment-Diet-Guest admin panel UI/UX.

Menu pre-design

- Features:
  - #17305 : Ergonomic improvements to the screen: Error, warning and success indicators after simulation are now visible on dishes and meal items even when they are folded.
- Bug fixes:
  - #18099 : Ergonomic improvements to the screen regarding the menu template tree structure when adding menu templates to a menu plan. Menu templates linked to the same parent menu template now appear grouped together below their parent menu template.

Production

Production plan v2 *(BETA screen non available yet)*

- Features:
  - #18112: ✔ It is now possible to manually shift the finished product outside the visible days using the "Change production date" option

Shipment

Smart packaging

- Bug fixes:
  - #18068: Fixed an issue with the packaging report API (GET /packaging-report/for-packaging-plan/production-site/:idProductionSite/dateProduction/:dateProduction). This crash case happened because of using the group by Texture, Segment, Diet and Guest and when two different sites have for a same recipe in the same consumption day for a same packaging with the same remaining quantity who partially filled this package.
