

# Easily 0.705.0

2025-10-28 14:35:14

*The changes and bugs corrected in versions 0.680.2, 0.700.1 and 0.700.2 are included in this version.*

## General

- Features:
  - #17838: ✓ Add widget spreadsheet for dashboards. It allows to build a table with custom text and values using dimensions and simple formulas.
- Bug fixes:
  - #18294: ✎ Fixed a vulnerability related to path traversal.

## Site parameters

### Profiles

- Features:
  - #18290: ⚠ Added tabs "By profile" and "By right" in the main page of the right management v2. Added a comparison table in the "By right" page to compare up to 6 profiles.

## Health and safety plan

### Dashboards

- Features:
  - #18242: ✓ Added AI assistant "Smart Analysis».

## Sites

### Site settings

- Features:
  - #18233: ✓ Added the ability to change a site's position in the tree structure.

## Equipement items

### Dashboards

- Features:
  - #18242: ✓ Added AI assistant "Smart Analysis".

## Products

### Products

#### Products administration

- Bug fixes:
  - #18360: (v. 0.700.1) Fixed an error while uploading documents.

#### Products administration - V2

- Features:
  - #18253: ✓ Products can be reactivated.
  - #18253: ✓ When a product is deactivated, all related supplier products are also deactivated.
- Rights changes:
  - Right "Reactivate a product" has been added.

#### Price lists

- Bug fixes:
  - #17542: ✓ The export/import of price lists now order by product label
- Bug fixes:
  - #18360: (v. 0.700.1) Fixed an error while uploading documents.

#### Suppliers

- Features:
  - #17956: ✓ Addition of a new option, 'Round quantity up to the next order multiple for splitable products in order preparation,' on the supplier file. If enabled, this option requires that, for products that can be unpacked, the quantity proposed in the order preparation screen comply with the order multiple, rounding it up to the next higher value. The option does not affect non-de-packaged products, for which the multiple always applies.

## Recipes

### Recipes

#### Recipes

- Bug fixes:
  - #18316: (v. 0.700.1) Fixed an issue leading to a logout when changing a component's coefficient.

#### Recipes management

- Features:
  - #18239: ✓ Reports print supports multilingual. When the environment is configured for multiple languages, it is now possible to select the desired language for the report when it is launched.
- Bug fixes:
  - #18271: (v. 0.700.1) Fix locale language when printing recipe in multilingual environment.

## Sales

### POS data

- Features:
  - #18336: ✓ In the 'History' tab, the 'current year' option has been added to the date picker.
  - #18358: ✎ Added API endpoint to delete POS products mapped to empty recipes within a date range.

### Dashboards

- Features:
  - #18242: ✓ Added AI assistant "Smart Analysis".

## Menus

### Menus

- Features:
  - #18239: ✓ Reports print supports multilingual. When the environment is configured for multiple languages, it is now possible to select the desired language for the report when it is launched.

### Smart Selection®

- Features:
  - #18292: ✓ For an inherited Smart Selection rule, the name of the site where it was created is now indicated.

### Menu quantities v2

- Features:
  - #18303: ✓ It is now possible to see the number of servings for each meal on each menu without the recipe details.
- Rights changes:
  - #18303: The right "Get a category menu and its meal types without dishes details on the specified date range" has been added.

### Menu pre-design

- Bug fixes:
  - #18177: "Add all" button now selects all visible categories menus in the list when creating/editing a menu plan (no more partial selection).

### Dashboards

- Features:
  - #18242: ✓ Added AI assistant "Smart Analysis".

## Supplier orders

### Supplier orders

- Bug fixes:
  - #18265: The external validation was not called after doing a modification of a supplier-order in a cart

### Receptions

- Bug fixes:
  - #18196: It is now possible to delete a receipt even if one of its products has a batch associated with another receipt.
  - #18196: It is now possible to delete a batch from a receipt even if that batch is associated with another receipt.

### Supplier invoices

- Features:
  - #18211: ✓ Supplier Invoices related to Orion are now automatically set to PAID after a validation.
  - #18235: ✓ Send receipt documents to Orion (modification of existing supplier invoice request)
  - #18355: ✎ Add API (/invoices/cancel-export) to cancel the export of invoices.
- Bug fixes:
  - #17436 / 17479: Enhance order and receipt linking logic in import invoice processing.

### Dashboards

- Features:
  - #18242: ✓ Added AI assistant "Smart Analysis".

## Production

### Production

- Features:

- #18239: ✔ Reports print supports multilingual. When the environment is configured for multiple languages, it is now possible to select the desired language for the report when it is launched.

## Shipment

### Packaging and logistics

- Features:
  - #18239: ✔ Reports print supports multilingual. When the environment is configured for multiple languages, it is now possible to select the desired language for the report when it is launched.

## Stock

### Known losses and markdowns.

- Features:
  - #18347: ✔ The default loss reason has been renamed to "Unknown" and can no longer be modified.

### Dashboards

- Features:
  - #18242: ✔ Added AI assistant "Smart Analysis".

## Management

### Dashboards

- Features:
  - #18242: ✔ Added AI assistant "Smart Analysis".

## Waste analysis

### Dashboards

- Features:
  - #18242: ✔ Added AI assistant "Smart Analysis".

## Tools

### Configuration

- Bug fixes:
  - #18346: (v. 0.680.2) Api token compatibility with old cypher token.

### Imports / Exports

- Features:
  - #18275: ✔ Add new field isRoundUpOrderMultipleEnabled for Supplier's export/import.
- Bug fixes:
  - #18326: (v. 0.700.2) Fixed losses and known shrinkages import (from losses flow).

### Interfaces

- Features:
  - #15951: ✔ Ouilink: Change in retrieval of supplier and site in the mapping.
