# Easilys 0.710.0

2025-11-12 10:07:16

*The changes and bugs corrected in versions 0.705.1 and 0.705.2 are included in this version.*

## General

- Features:
  - #18248: 🔧 Added compatibility with Mapal-OS reference token.
  - #10562: ⛔ Added config key MAPAL_BUS_EVENT_DRIVEN_FLOW to enable the products, sales and losses flows to process files directly as they arrive. This config key is enabled by default and overrides the flows config keys and all sales and losses related jobs.
  - #18375: 🔧 Added multilingual field Dish.labelI18n.
- Bug fixes:
  - #18294: 🔧 Fixed vulnerabilities related to path traversal.

## Sites

### Site settings

- Features:
  - #18381 : ✔ Display "billiable" status depends on site synchronization with Mapal. It is once again possible to define a site connected to Mapal-OS as 'billable' directly from Easilys (individual modification reserved for internal Mapal administrators).
  - #18295 : ✔ Addition of an option 'Orders delivered to other sites are invoiced by default to the billing address defined on each delivery site' which can be enabled in the Site Settings screen under the 'Orders' section.
    - When this option is not enabled, the billing address is that of the site creating the order.
    - When this option is enabled, the billing address is that of the delivery location.
    - This option applies:
      - to manual orders when a delivery location other than the location creating the order is selected
      - to orders generated by order preparation in the case of smart delivery rules resulting in delivery to a location other than the one placing the order..

## Products

### Price lists

- Bug fixes:
  - #18473: *(v. 0.705.2)* Fix "order multiple" and "unpackable" columns in import matrix.

### Product families administrations

- Bug fixes:
  - #18471: Fix "Show origin of products from this family in menu reports" checkbox label.

### Smart Catalogue®

- Features:
  - #18359: ✔ Addition of 'supplier type' as a new criterion for external and internal suppliers. Thanks to this criterion, when you want a rule to apply to external suppliers and not to internal suppliers (central warehouse/laboratory, etc.), it is no longer necessary to select all external suppliers one by one. This simplifies configuration, reduces the risk of errors/omissions in selection, and makes the rule sustainable, since in the event of a market change, it is no longer necessary to modify the rule to select new external suppliers.
    - ⚠ In this version, this criterion can be used in rules but does not currently have any impact on the rest of the application..

## Recipes

### Recipes management

- Bug fixes:
  - #17936: It is no longer possible to activate a legacy recipe that has been deactivated by the site that owns it.
  - #18423: The search of recipe categories now works in all locales when multilingual data is enabled.

### Print labels

- Features:
  - #18434: ✔ The production batch number in INCO labels has changed to format YYYYMMDD-recipeId-siteId-incrementalId

## Menus

### Menus

- Bug fixes:
  - #18353: Fixed an issue preventing the disabling of a menu template.
  - #10204: ✔ Add "External Code" column to "Quantities by dish" menu report.

### Smart Selection®

- Features:
  - #18257: ✔ Addition of 'supplier type' as a new criterion for external and internal suppliers. Thanks to this criterion, when you want a rule to apply to external suppliers and not to internal suppliers (central warehouse/laboratory, etc.), it is no longer necessary to select all external suppliers one by one. This simplifies configuration, reduces the risk of errors/omissions in selection, and makes the rule sustainable, since in the event of a market change, it is no longer necessary to modify the rule to select new external suppliers. In this version, this criterion can be used in rules but does not currently have any impact on the rest of the application.
- Bug fixes:
  - #18292: *(v. 0.705.1)* Fixed an issue preventing the creation and the update/delete of smart selection rules.

Menu pre-design
- Features:
  - #17917: ✔ For performance reasons, it is no longer possible to add recipes created on child sites of the site on which the menu plan is being created to the menu plan.
- Bug fixes:
  - #18447: Clicking on the 'Favourites' icon no longer adds the recipe to the menu plan.

## Guest orders
Guest orders
- Bug fixes:
  - #18125: 🖉 Fixed a bug that caused recipe quantities to be deleted when reducing the overall number of items on the menu.

## Supplier orders
Order preparation
- Features:
  - #18298: ✔ New '*Orders delivered to other sites are invoiced by default to the billing address defined on each delivery site*' option taken into account to define the site invoiced when creating the order supplier from the preparation screen.
- Bug fixes:
  - #18484: *(v. 0.705.2)* Fixed a bug where orders cannot be exported if a supplier product which is not unpackable has a valid quantity in order unit but a ratio of order unit to production unit different from 1.

Supplier orders
- Features:
  - #18299: ✔ The new site option 'Orders delivered to other sites are invoiced by default to the billing address defined on each delivery site' is taken into account to define the site invoiced when changing the delivery site on a purchase order.
  - #18299: ✔ In purchase orders, it is now possible to change the site to be invoiced by selecting it from the list.

## Production
Finished Product Production Plan
- Features:
  - #18439: ✔ Renaming of the 'Production Plan V2' screen to 'Finished Product Production Plan' and removal of the BETA tag.

Production management
- Features:
  - #18436: ✔ It is now possible to print INCO labels for recipes in the Production Management screen. By clicking on the [...] button on the line of the desired recipe, the INCO label printing panel is displayed, allowing you to configure and launch the report.

## Stock
Exit vouchers
- Features:
  - #18399: ✔ It is now possible (thanks to the X that has been added) to clear the entry in the recipe/supplier product search field.

Inventories v2
- Features:
  - #18455: ✔ When adding a new inventory, the suggested type is now "Global".
  - #18086: 🖉 Filters (particularly quantities and storage areas) are taken into account in inventory reports.
  - #18301: ✔ Completed inventories are now automatically closed when the site option 'Automatically close an inventory with the status "Completed"' is enabled.
  - #18301: ✔ The option 'Do not allow an inventory to be declared "Completed" or "Closed" if deliveries have the status "In progress"' is now taken into account.

## Management

### Food cost price

- Bug fixes:
    - o #18424: Correction to the calculation of final stock in the daily cost price: the system now takes partial inventories into account to adjust the total stock, instead of completely replacing the final stock with the partial inventory amount.

## Tools

### Imports / Exports

- Features:
    - o #18091: ✔ Add currency field to supplier import / export
    - o #18094: ✔ Add smart yield rules import.
    - o #18390: ✔ Added multilingual import / export for recipes.
    - o #18301: ✔ Site import: column siteBlockClosingInventoryWithPendingReceipts is renamed to siteBlockFinishingOrClosingInventoryWithPendingReceipts.

### Interfaces

- Features:
    - o #18433: ✔ Added interface Orion validation of supplier invoices case 2 (SF > EJ on existing line)

### Mapal OS

- Features:
    - o #18412: ✔ Added much more logs when receiving a message from complys for the userEdit pipeline
