

# Easily 0.720.0

2025-12-09 15:29:13

*The changes and bugs corrected in version 0.715.1 are included in this version.*

## General

- Features:
  - #18488:  Added multilingual field Dish.labell18n.
  - #17031:  Added config key JOB\_SALES\_RECEIPT\_DATA\_RETENTION\_DAYS, this key has default value of 90 days.

## Site parameters

### Information

- Bug fixes:
  - #18043: Deny update from API if stock transfers are enabled, but there is no stock transfer tag.
  - #18043: When updating a site, children site values of "Enable counting areas" and general account codes are not replaced by the new values anymore.

## Sites

### Site settings

- Features:
  - #18583:  In the 'Point of sales data' section of a site file, addition of the 'Incoming routing rules' section, which displays the list of sites sending their sales to this site as well as the sales method sent.
  - #18043:  Addition of an 'Accounting' section with account number settings. These settings can still be managed in 'Site parameters > Information', but adding them to the site file in 'Sites > Site settings' allows them to be modified by selecting multiple sites.

## Products

### Products administration - V2

- Features:
  - #18262:  Addition of the concept of 'traces of allergens' on industrial products.

### Price lists

- Features:
  - #18262:  Addition of the concept of 'traces of allergens' on industrial products.

## Recipes

### Recipes management

- Features:
  - #18592:  Adding allergen trace information to recipe details

### Recipes

- Features:
  - #18592:  Adding allergen trace information to recipe details

### Smart Yield

- Bug fixes:
  - #18576: Now it is possible to import Smart Yield using extld instead of Id.

## Sales

### POS data

- Features:
  - #17031:  Added a function in 'JOB\_DAILY\_TASKS' to delete old sales receipts from the database using a new configuration key 'JOB\_SALES\_RECEIPT\_DATA\_RETENTION\_DAYS'. The number of days used for deletion will be the greater of 'JOB\_SALES\_RECEIPT\_DATA\_RETENTION\_DAYS' and 'JOB\_SALES\_RECEIPT\_CONSOLIDATION\_ON\_HOW\_MANY\_DAYS\_IN\_PAST'. Receipts older than 90 days are now automatically deleted from the database. Of course, the consolidated history of turnover and other indicators by receipt, by site, etc. is retained. The retention period can be changed.

## Menus

### Smart Selection®

- Features:
  - #18448:  The 'Supplier type' criteria is now included in the smart selection engine.

### Menu pre-design

- Bug fixes:
  - #18594: (v0.715.1) Fixed issues with recipe display in menu pre-design

## Supplier orders

### Order preparation

- Bug fixes:

- #18547 : Order carts for suppliers without defined sending methods are now displayed as soon as they are created, without the need to refresh the screen.
- #18515: The setting for the option 'Orders delivered to other sites are invoiced by default to the billing address defined on each delivery site' for legacy suppliers is now correctly taken into account, both when it has been modified on the emphasis site (overridden data) and when it has not (legacy retained).
- #18380: The calculation mode selection switch (From menus/ From delivery notes) is now correctly initialised when switching between sites.

#### Receptions

- Bug fixes:
  - #17720:  Fix inconsistency between batch quantity and product quantity in receipt created by the API /Deliveries

#### Claims

- Features:
  - #18626: Added the parameters 'withAllChildren', "withDirectChildren" and 'withoutGivenSites' to the claims route. Added the supplier order extId to the claims route..

### Production

#### Production

- Bug fixes:
  - #18380: The calculation mode selection switch (From menus/ From delivery notes) is now correctly initialised when switching between sites.

#### Finished Product Production Plan

- Features:
  - #18404:  Add DLC (lifetime) violation checks and show warnings in the Finish product production plan. A visual alert is added when a recipe is planned beyond its theoretical expiry date.
  - #18440:  Fix the moving date range, put calendar between arrows, add buttons to move to the next/previous week.

#### Production management

- Bug fixes:
  - #18380: The calculation mode selection switch (From menus/ From delivery notes) is now correctly initialised when switching between sites.

### Shipment

#### Site supply

- Features:
  - #18398 :  Added information about the site (ID, code, dynamic field) to the delivery report route.

### Stock

#### Stock removal

- Features:
  - #18505:  Show negative stock. Authorize to make movement for product with negative stock or result to negative stock. Show replacement product with negative stock.

### Tools

#### Imports / Exports

- Features:
  - #18419:  The new 'supplier type' criterion can now be exported and imported in Smart Catalogues Import/Export.
- Bug fixes:
  - #18575: Fix supplier product import with two products with the same extId but one is inactive.

#### Interfaces

- Features:
  - #18438:  The Orion integration now supports freight costs and provides clearer error messages to help users better understand and resolve issues.
- Bug fixes:
  - #18588:  It is possible to manage all tables with extId in the generic extId update.
