Easilys 0.725.0

2025-12-18 12:33:41

The changes and bugs corrected in versions 0.720.1 and 0.720.2 are included in this version.

Site parameters

Users

- Features:
    - #18717: ✔ Increase username maximum length from 30 to 60 characters

Call for tenders

Call for tenders

- Bug fixes:
    - #18701: *(V 0.720.2)* Fixed a bug that prevented editing and saving units in tenders.
    - #18701: *(V 0.720.2)* Fixed a bug in the allergen and storage area administration panels.
    - #18701: *(V 0.720.2)* Fixed an error while saving an answer with "no product".

Products

Price lists

- Features:
    - #18641: ✔ Update of the error message when attempting to create a product that already exists on the child site in a price list.
- Bug fixes:
    - #18676: Fixed an issue that prevented the automatic generation of hidden price lists. The `JOB_GENERATE_SUPPLIER_SITE_PRICELISTS` task no longer prevents other sites from being processed when creating a price list that may contain errors. The job `JOB_GENERATE_SUPPLIER_SITE_PRICELISTS` no longer takes into account supplier products resulting from a transfer of stock from a child site when creating a list of products in stock and/or available for purchase.

Recipes

Smart Yield

- Bug fixes:
    - #18696: Now it is possible to import Smart Yield using a CSV file containing uppercase extIdValue.

Menus

Menu pre-design

- Features:
    - #18599: ✔ Redesign of the user interface for creating, duplicating, and displaying menu plans.
- Bug fixes:
    - #18669: The bug of the recipe pins has been fixed, and actions on menu plan past dates are no longer possible.
    - #18554: The recipe search list was using a "real time" search, we removed this feature to match the behaviour of other screen, and to remove the performance bottleneck. Also fixing a broken case, using multiple dish id in internal filters.
    - #18667: Fixed the colours of the different statuses and added a message when hovering over the status tag.

Supplier orders

Supplier invoices

- Features:
    - #18635: ✔ Allow the change of "Analytical group off products" invoice line of an invoice automatically generated from a delivery note.

Tools

Interfaces

- Features:
    - #18657: ✔ *(V 0.720.1)* Correction of an interface to use the correct site identifier when reporting sales, avoiding assignment errors. Added the 'useExtIdForSiteCode' configuration option to find the site where sales are created using the JES 'site.code' and the Easilys site 'extId' instead of "id"."
    - #18598: ✔ Markup grids are applied on Yooz imported invoices.
    - #18638: ✔ Delivery backlogs in Orion are managed when there are multiple separate invoices for the same order.
    - #18647: ✔ Orion interface now checks that a service done has at least one attachment before being send
    - #17969: ✔ Change of ORION EJ and SF codeInterface
