

Easilys 0.675

2025-08-12 10:40:55

General

- Features:
 - #17993:  Added MAPALOS_ADMIN_USER_ID configuration parameter to specify a Mapal OS user ID that should login as the super admin user in Easilys.

Products

Price lists

- Features:
 - #17843:  Improved performance when adding a product to a pricelist where there is a lot of supplier products in the database (4s to 300ms).

Suppliers

- Bug fixes:
 - #17889: Fixed a bug with the payment method assigned to the creation of a purchase order. It occurred when the site placing the order had not specified a specific payment method in the supplier's file (inherited data not overridden) while having activated the list of payment methods. By default, the activated payment methods and the supplier's value are now set to "None."

Recipes

Recipes management

- Features:
 - #18014:  The label text field of Texture is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Segment is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Diet is now a multi-language text field (data translatable by the user into the language defined in their profile).

Nutrition

Nutrition families

- Features:
 - #18014:  The label text field of Guest is now a multi-language text field (data translatable by the user into the language defined in their profile).

Menus

Menus

- Features:
 - #18014:  The label text field of Texture is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Segment is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Diet is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Guest is now a multi-language text field (data translatable by the user into the language defined in their profile).

Menu templates

- Features:
 - #18014:  The label text field of Texture is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Segment is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Diet is now a multi-language text field (data translatable by the user into the language defined in their profile).
 - #18014:  The label text field of Guest is now a multi-language text field (data translatable by the user into the language defined in their profile).

Menu pre-design

- Features:
 - #18022:  Ergonomic improvements:
 - The 'pin' icon is now always visible on pinned recipes; previously, it only appeared when you hovered over the recipes.

- The status of the simulation icon remains unchanged after pinning or unpinning a recipe.
 - #18023: ✔ Addition of the new 'Expand All / Collapse All' feature, which allows you to view/hide the details of the planned recipes (following the simulation) for each menu frame of each site with a single click in the context panel.
- Bug fixes:
 - #18024: Ergonomic improvement:
 - Changed the names of the buttons 'Configure' and "View" to 'Menu plan sheet' and 'Managing recipes'.
 - Added a space between the circular icon and the menu label.

Supplier orders

Supplier orders

- Bug fixes:
 - #14695: Fix the display of the order unit of the order comparison modal.

Track orders

- Features:
 - #17877: Blocking the bulk sending of orders that require validation via an external process. From now on, if at least one of the selected orders concerns a supplier for whom orders must be sent via an external process (option in the supplier file), it will be impossible to bulk change their status to 'sent' using the 'Status' button, and a message will indicate the reason why.

Receptions

- Bug fixes:
 - #16754: Reception delivery date was unchangeable in DUTCH.
 - #18040: Correction: the alert button used to change a delivery status from 'PENDING DELIVERY' to 'IN PROGRESS' was missing when using the application in languages other than French. The icon now displays correctly for all supported languages.

Control on Reception

- Bug fixes:
 - 17206: Fixed a bug that prevented certain products from being validated in the Control on Reception screen when the invoiced quantity was a decimal number.
 - #17206: The label for the received product is now crossed out only when the quantity received is less than or equal to 0.
 - #17206: Fix the validation bugs related to swipe controls.

Production

Production plan v2 (BETA Screen not available yet)

- Bug fixes:
 - #18019: Production reports (detailed, simplified, by range, by storage area) now take into account the manual delay in the production of finished products.

Stock

Stock

- Features:
 - #17158: ✔ It is now possible to enter stock removals with the origin 'Known loss or markdown'. When selecting this origin, the reason must be entered. The reasons can be managed from this screen using the cogwheel, as was already the case from the 'Stock>Known losses and markdowns' screen. Losses entered from this screen are visible in the stock movements view of the 'Stock>Stock' screen and also in the 'Stock>Known losses and markdowns' screen.

Tools

Imports / Exports

- Bug fixes:
 - #17686: While we are importing, the expiry date of a price list is now included.
